

Remove proxy access when accessing personal Wi-Fi

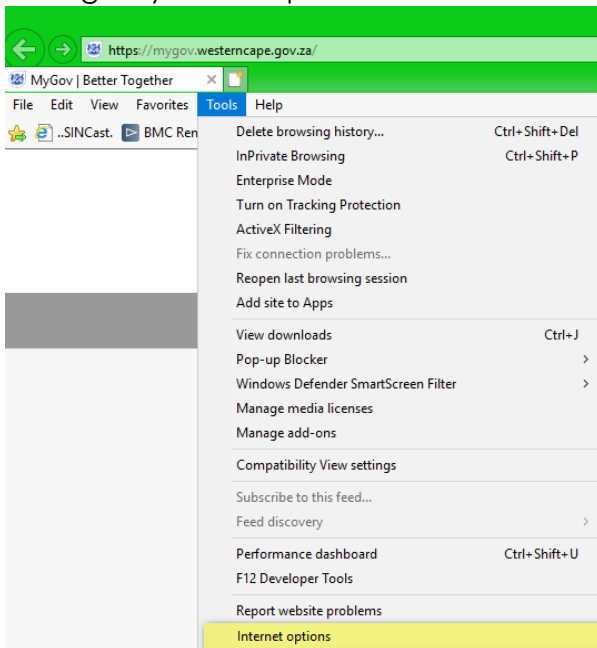

1. Go into the internet browser as below.

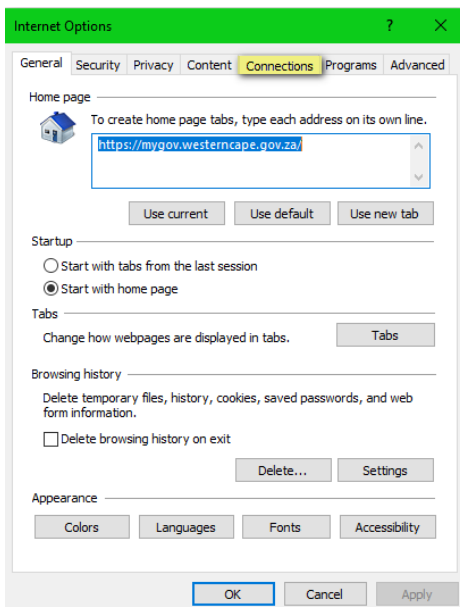

2. In your browser go to the **Tools** tab.

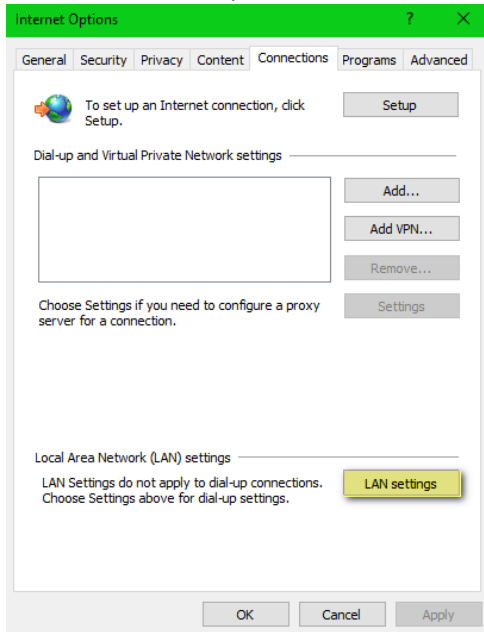

3. It will give you a drop-down menu in which you will select **Internet Options**.

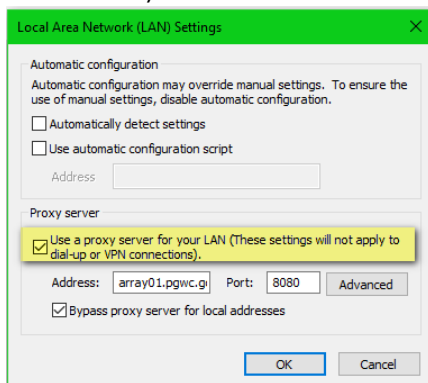

4. Internet Options will open, from that Tabs on top you will select the **Connections Tab**.

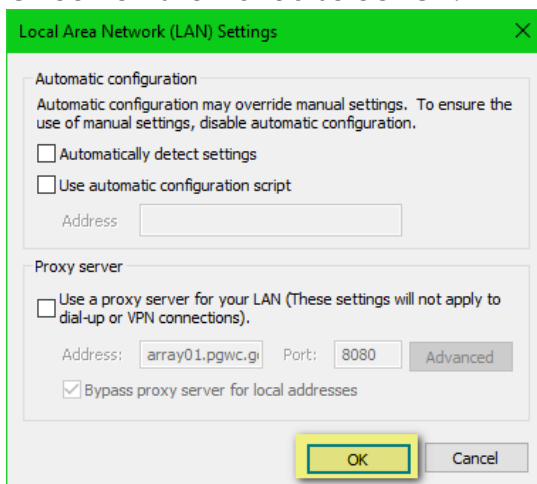

5. In Connections you will select **LAN settings**.

6. In LAN Settings under proxy server, you will need to untick the box use proxy server for your LAN.

7. Once tick is removed select OK.

8. And then OK again, Closed the internet browser.

9. You can open the internet browser again after you connect to your Wi-Fi and test to see if you can access internet.
